

## **Super Friday Science Fall Semester 2010**

Welcome to Science! As we start this fall we will learn about our Incredible Bodies. We will be using two different curriculums. One from NASA that will help the older kids learn how the body works in space and why that relates to us on Earth. For the younger children we will be using “The Incredible Human Body” by Scholastic Professional Books. We will use experiments to learn how food is digested in our bodies.

We will build skeletons and learn to work like a research team. Each group will be assigned a job - Principal Investigator, Maintenance Director, Reporter, or Materials Manger. Each will be required to fulfill job requirements in class.

Each student will make a poster about a Scientist and present it to the class. We will learn about the different types of cells in our body. We will look at real body parts as they pertain to the class.

This Semester Be Ready! We will learn about how the body works in a very active way. See you in August.
